

PONDICHERRY UNIVERSITY

(A CENTRAL UNIVERSITY)

B.Sc. Computer Science (Choice Based Credit System)

Regulations & Syllabus

2019-20 onwards

Pondicherry University
B.Sc.(Computer Science)

REGULATIONS

(Effective from the academic year 2019-2020)

1. Aim of the Course

The B.Sc. (Computer Science) course aims to impart the students with fundamental and hands on knowledge of computers, science of computing and modern computer science technologies.

2. Eligibility of Admission

Candidates for admission to B.Sc.(CS), shall be required to have passed 10 + 2 system of Examination or equivalent with Mathematics / Business Mathematics / Computer Science / Computer Applications as one of the subjects of study.

3. Lateral Entry Admission

Candidates who have passed Diploma in Computer Science / Information Technology/ Computer Technology / Computer Application in I Class (10+3 years of study) are eligible to apply for the lateral entry to the 2nd year of the course subject to availability of seats, but limited to 10% of the sanctioned intake.

4. Duration of the course

The course shall be of three years' duration spread over six consecutive semesters. The maximum duration to acquire prescribed number of credits in order to complete the Programme of Study shall be twelve consecutive semesters (six years).

5. Medium

The medium of instruction shall be English.

6. Course Structure

Category	Course Name	Number Of Papers	Credits Per Paper	Total Credits
MIL	Modern Indian Languages	2	3	6
ENG	English	2	3	6
AECC	Ability Enhancement Compulsory Course	2	2	4
SEC	Skill Enhancement Course	4	2	8
GE	Generic Elective Course	2	3	6
DSC	Discipline Specific Core Course	Theory- 12 Practical – 9 Project -1	Theory- 3 Practical – 2 6	12x3=36 9 x 2 =18 1 x 6 = 6 Total = 60
DSE	Discipline Specific Elective Course	6	4	6 x 4 =24
OE	Open Elective Course	2	3	2 x 3 =6
			Total	120

MIL, ENG, AECC

The crediting of MIL, ENG and AECC courses is as per Pondicherry University UG CBCS regulations.

DSC and DSE

At least 60% (72 credits) of the total minimum credit requirement must be earned by the student from DSC and DSE courses as follows in order to obtain the degree - 60 credits from Discipline Specific Core and 12 credits from Discipline Specific Elective courses.

SEC

Out of the 4 Skill Enhancement Courses, one course viz. - Online Course / In-Plant Training (2 weeks) / One month Internship / mini project is mandatory. The Online Course to be studied, the organization to be chosen for In-Plant Training or One month internship is to be

validated or approved by a panel of members comprising of the Department Faculty, before a student pursues the same.

For the remaining 3 SEC courses, any of the 2 credit Skill Enhancement Courses specified in the curriculum (B.Sc. CS) could be credited or substituted with Skill Enhancement Courses in the curriculum of other UG computer science courses or Skill Enhancement Courses of other UG Non-Computer Science Disciplines of study that constitute to skill development or an assortment of these without any overlap of courses.

GE

Any 2 of the 3 credit Generic Elective Courses specified in the curriculum (B.Sc. CS) could be credited to constitute the 6 credits or substituted with Generic Elective courses in the curriculum of other UG Computer Science Disciplines of study or UG Courses of Non-Computer Science Disciplines of study that add proficiency to the students - with the advice of the Faculty Advisor, or an assortment of these without any overlap of courses.

DSE

The six 4 credit papers to be credited under DSE can be credited from Discipline Specific Elective specialization stream courses as follows:

- a. Three of the 4 credit courses can be credited from one specialization streams, thus completing 2 specialization streams. (or)
- b. All six 4 credit papers can be credited from any specialization stream across the different specialization stream courses specified in the curriculum without any overlap of courses credited in above. (or)
- c. Another specialization stream courses or across the different specialization stream courses in the curriculum of other UG Computer Science Disciplines of study without any overlap of courses credited in above.

OE

Any 2 of the 3 credit Open Elective Courses specified in the curriculum (B.Sc. CS) could be credited to constitute the 6 credits or substituted with Open elective courses in the curriculum of other UG Computer Science disciplines of study or substituted with UG Courses of Non-Computer Science Disciplines of study that add proficiency to the students - with the advice of the Faculty Advisor or an assortment of these without any overlap of courses.

7. Faculty to Students Ratio

The Faculty to Student Ratio in all the practical / laboratory classes shall be maintained at 1:25.

8. Pattern of Examination

- I. The End-Semester examination and internal assessments for MIL, ENG, AECC, DSC, GE and OE courses are as per Pondicherry University UG CBCS regulations.
- II. All SEC courses (except Online Course / In-Plant Training (2 weeks) / One month Internship) to be treated as a practical / laboratory course and the End-Semester examination to be conducted as per Pondicherry University UG CBCS regulations.
- III. The internal assessments for all practical / laboratory courses (for DSC, SEC courses) shall be as follows – 15 marks from two internal practical / laboratory assessment tests and 5 marks based on practical / laboratory course based mini application development.
- IV. The internal assessment for DSE courses shall be conducted as follows - 12 marks from two internal assessment tests and 8 marks based only on two internal practical / laboratory assessment tests.
- V. The attendance mark (5 marks) is applied to all courses and the awarding of attendance marks is as per Pondicherry University UG CBCS regulations.
- VI. The Project work is to be evaluated as follows:
 - i. The internal assessment (25 marks) is awarded as follows:
 - a. 10 marks is awarded based on two internal project reviews conducted in periodic intervals by a panel comprising of members of the Department during the tenure of the project.
 - b. The student's project guide awards 10 marks for the project work and 5 marks for attendance (attendance marks as specified in the Pondicherry University UG CBCS regulations).
 - ii. The End Semester Examination assessment (75 marks) is evaluated under two aspects viz – i)Project Work – (50 marks) ii)Project Report and Viva-Voce (25 marks)

Passing Minimum

Passing Eligibility and classification for the award of the Degree is as per Pondicherry University UG CBCS regulations.

Lateral Entry

The Lateral Entry students have to complete 81 credits from the DSC, DSE, GE, SE, OE courses as per curriculum (IIIrd to VIth semesters). In addition, they should complete the two AECC courses (4 credits) for the award of the degree. One MIL (3 credits) and one ENG (3 credit) courses also need to be completed, if it is not studied in the last three years of the course eligible for lateral entry admission.

Other aspects of CBCS not covered in this document by default conforms to the Pondicherry University UG CBCS regulations.

Programme Outcomes

B.Sc (CS) programme has been designed to prepare graduates for attaining the following specific outcomes:

PO1 – It provides an ability to apply knowledge of Mathematics, Computer software and hardware in practice. It enhances not only comprehensive understanding of the theory but practical also.

PO2 - The program prepares the young professionals in wide range of areas such as Digital logics and computer architecture, Algorithms, Programming, Networking, Software Engineering, Information Security, Web Designing, Micro-processors and micro-controllers.

PO3 - In order to enhance programming skills of the young IT professionals, the program has introduced the ability to identify a problem, isolate its key components, analyze and assess the salient issues, set appropriate criteria for decision making, and draw appropriate conclusions and implications for proposed solutions.

PO4 – The program equips to demonstrate the capabilities required to apply cross-functional business knowledge and technologies in solving real-world problems and to demonstrate use of appropriate techniques to effectively manage business challenges.

PO5 - curriculum is divided based on various streams specialization that is needed in the IT Domain. Hence a student can specialize himself/herself in a particular stream.

PO6 - It provides an opportunity to prepare for the competitive examination and also getting admission to Higher Education.

PO7 - Become employable in various IT companies as programmer, system engineer, software tester, junior programmer, web developer, system administrator, software developer etc.

PO8 – Ability to work in public sector undertaking and Government organizations.

PONDICHERY UNIVERSITY

Bachelor of Computer Science

PROPOSED STRUCTURE OF THE COURSE UNDER CBCS 2019-2020

FIRST SEMESTER

COURSE	SUBJECT CODE	Paper	CREDITS		HOURS		
			Th	Prac	L	T	P

DISCIPLINE SPECIFIC CORE

Paper Code: CSCS113

INTRODUCTION TO PROBLEM SOLVING USING C

L	T	P
3	2	0

Prerequisite: - Basic knowledge of Mathematics and computers

Objectives:

- To learn the concepts of “ C ” Programming
- To develop software program using “C” language

Outcomes:

- In-depth understanding of various concepts of C language.
- Skill to write program code in C to solve real world problems and to debug a program

MODULE – I

Introduction to Computers– Introduction to Programming - How to develop a program, Algorithms, Flow-charts, Types of Programming Languages - Debugging, Types of errors - Techniques of Problem Solving – Problem solving aspects – Top- Down aspects –Structured programming concepts.

MODULE – II

Character Set, Structure of a ‘C’ Program, Data Types, Operators, Expressions, Assignment Statement, Conditional Statements, Looping Statements, Nested Looping Statements, Multi Branching Statement (Switch), Break and Continue, Differences between Break and Continue, Unconditional Branching (Go to Statement)

MODULE – III

Functions: Defining and accessing: Passing arguments, Function prototypes, Function calls- Categories of functions- Nesting of functions- Recursion. Use of library functions, Scope , Visibility and Lifetime of variables.

MODULE – IV

Arrays: Declaration and Initialization of one and two dimensional arrays – Multidimensional array – dynamic arrays - Character arrays and strings. Structure: Defining and processing. Structure initialization Operations on individual members Arrays of structure, Arrays within Structure, Structure and Functions- Passing to a function, Union.

MODULE – V

Pointers: Declarations and initialization of pointer variables ,Accessing pointer variables, Passing to a function. Operations on pointers, pointer and arrays. Array of pointers, Pointer to Functions. Data Files: Open, close, create, process unformatted data files.

TEXT BOOK

PROGRAMMING IN C LAB

LIST OF EXERCISES

1. Simple C programs
2. Program to illustrate control statements
3. Program to illustrate FOR loop
4. Program to illustrate SWITCH & WHILE statements
5. Program to illustrate functions
6. Program to illustrate user-defined functions
7. Program to illustrate arrays
8. Program to illustrate usage of pointers
9. Program to illustrate character handling libraries.
10. Program to illustrate string manipulation
11. Program to illustrate creation of files.
12. Program to illustrate creation, reading & accessing files

Paper Code: CSCS114

L	T	P
3	2	0

DIGITAL LOGIC & COMPUTER ORGANIZATION

Prerequisite: Basic knowledge about computers

Objectives:

- To learn the fundamentals of digital logic and computer design.
- To learn combinational and sequential logic.

Outcomes:

- Skill to use the methods of systematic reduction of Boolean expression using K- Map. Ability to interpret logic gates and its operations.
- Familiarization with combinational and sequential logic circuits in electronics.

MODULE – I

Number systems & Conversions – Arithmetic of number systems – binary codes – BCD – The excess – 3code – Gray code – ASCII – EBCDIC - Introduction to Logic Circuits – logic functions & gates – Inversion – truth tables – logic gates – truth table of basics gates – timing diagrams of NOT, AND & OR gates – Boolean algebra – NAND& NOR logic gates - truth table of a logic circuit – de-morgan’s theorem.

MODULE – II

Logic families – factors affecting performance of a logic family – register transistor logic – diode transistor logic – DCTL – ECL – TTL logic family – Karnaugh maps – two, three & four-variables K-map – loops in K-map – mapping of K-maps – don’t care condition

MODULE – III

Combinatorial logic circuits – designing procedure– code converters – multiplexers – multiplexer tree – demultiplexers /decoders – half & full adder – half & full subtractor – encoders – BCD adder

MODULE – IV

Sequential logic circuits – sequential circuits – SR flip flop – D flip flop – JK flip flop – T flip flop – flip flop triggering – Shift registers – Design of shift registers design of ripple counters with examples Design of synchronous counter with examples timing sequences.

MODULE – V

Register transfer logic Inter register transfer Arithmetic, Logic and shift micro operations Conditional control statements fixed point binary data overflow Arithmetic shifts Instruction codes Design of simple computer.

DIGITAL LAB

L	T	P
0	0	4

LIST OF EXERCISES

1. Study of Logic Gates
2. Design of Adder and Subtractor
3. Design and Implementation of Code Convertors
4. Design of 4-Bit Adder and Subtractor
5. Design and Implementation of Magnitude Comparator
6. 16 Bit Odd/Even Parity Checker and Generator
7. Design and Implementation of Multiplexer and De-multiplexer
8. Design and Implementation of Encoder and Decoder
9. Design and Implementation of Shift Register
10. Simulation of Logic Gates
11. Simulation of Adder and Subtractor
12. Design of 4-Bit Adder and Subtractor

Paper Code: CSCS123

3	0	0

PYTHON PROGRAMMING

Prerequisite: Knowledge of any programming language

Objectives:

- To learn basic python concept.
- To develop simple Python programs and code reusing with functions

Outcomes:

- Skill to write codes in Python to solve mathematical or real world problems.
- Ability to isolate and fix common errors in Python programs.

MODULE 1

Introduction to Python - The IDLE Python Development Environment - The Python Standard Library - Literals - Numeric Literals - String Literals - Control Characters - String Formatting - Implicit and Explicit Line Joining Variables and Identifiers - Variable Assignment and Keyboard Input- Identifier-Keywords and Other Predefined Identifiers in Python – Operators - Various Operators - Relational Operators-Membership Operators – Boolean Operators - Expression and Data Types -Operator Precedence and Boolean Expressions - Operator Associativity - Mixed-Type Expression

MODULE 2

Control Structure -Selection Control- If Statement - Indentation in Python - Multi-Way Selection - Iterative Control - While Statement - Input Error Checking - Infinite loops - Definite vs. Indefinite Loops

MODULE 3

List Structures - Common List Operations - List Traversal - Lists (Sequences) in Python- Python List Type - Tuples- Sequences- Nested Lists Iterating Over Lists (Sequences) in Python - For Loops - The Built-in range Function - Iterating Over List Elements vs. List Index Values-While Loops and Lists (Sequences) - Dictionaries and sets

MODULE 4

Defining Functions - Calling Value-Returning Functions - Calling Non-Value-Returning Functions - Parameter Passing - Keyword Arguments in Python Default Arguments in Python - Variable Scope - Recursive functions - Exception Handling -The Propagation of Raised Exceptions - Catching and Handling Exceptions -Exception Handling and User Input

MODULE 5

String Processing - String Traversal - String-Applicable Sequence Operations -String Methods - Using Text Files - Opening Text Files - Reading Text Files - Writing Text Files

DATA STRUCTURES & ALGORITHMS

Pre-requisite: Knowledge of any programming language

Objectives:

- To acquaint students with data structures used for programming and manipulation of data.
- To make students to understand the basics of algorithms.

Outcomes:

- Skill to analyze data and to determine appropriate data structure. Knowledge of various data structures and their implementations.
- Ability to implement algorithms to perform various operations on data structures.

MODULE-I

Introduction to Data Structure: Types of Data Structures - Linear & Non Linear Data Structures. Linear Data Structure - Arrays: Representation of arrays, Applications of arrays - Searching: Linear search and Binary Search. Stacks: Representation, Operations on stack, Implementation of stack using array, Application – Evaluation of Expression.

MODULE-II

Queues: Representation, Operations on Queues, Implementation of queues using array. List representations, implementing the list operations, Doubly linked list representation. Polynomial - representations.

MODULE-III

Non Linear Data Structures: Trees: Basic terminology, Binary tree, Representation, Traversal, Binary search tree.

MODULE-IV

Graph: Definition and Terminology – Representation, Traversal – Depth First and Breadth First traversal techniques.

MODULE-V

Introduction to Algorithms: Algorithm Design Techniques – Iterative techniques: Bubble Sort, Insertion Sort, Divide and Conquer: Merge Sort, Quick Sort

TEXT BOOKS

OPERATING SYSTEMS

Pre-requisite: Knowledge of computers & computer organization

Objectives:

- To learn OS management functions.
- To learn Memory management, Processor management, Device Management and I/O Management

Outcomes:

- Understand how memory is utilized. Understand CPU scheduling algorithms to manage tasks.
- Knowledge of methods to prevention and recover from a system deadlock. Manages I/O devices.

MODULE –I

Operating Systems – Introduction – Basic Concepts and terminology – As OS Resource Manager – OS process view point – OS hierarchical and extended machine view – Memory management: Single contiguous memory allocation – Introduction to multiprogramming – Partitioned memory management.

MODULE –II

Memory management: Relocatable partitioned memory management – Paged memory management – Demand paged memory management – Segmented memory management – Segmented and Demand – Paged memory management – Swapping and Overlays.

MODULE –III

Processor management – State model – Job scheduling - Process scheduling – Multi Process system – Process Synchronization.

MODULE –IV

Device Management: Techniques for Device Management – Device Characteristics – Channels and Control Unit – Device Allocation – I/O Controller, Scheduler, Device Handler-Virtual Devices

MODULE –V

Information Management : A simple file system- General Model of a File System – Symbolic File System – Basic File System – Access Control Verification – Logical file system – Physical file system – Allocation strategy module.

3	1	0

OBJECT ORIENTED PROGRAMMING USING JAVA

Prerequisite: Basic knowledge of programming

Objectives:

- To learn the basic concepts of OOP
- To develop Java programs, Swing and Applets

Outcomes:

- Skill to write Java application programs using OOP principles and proper program structuring.
- Ability to create packages and interfaces. Ability to implement error handling techniques using exception handling.

MODULE - I

Concepts of OOP: Introduction OOP, Procedural Vs Object Oriented Programming, Principles of OOP, Benefits and applications of OOPS

MODULE – II

Introduction to java applications – Introduction to classes, objects, methods & Strings - Control statements – Arrays - constructor – function overloading & overriding - Inheritance - Polymorphism – Interface – package - exception handling

MODULE – III

GUI components –Overview of Swing components –Displaying Text and Images in a Window - Text Fields , Introduction to Event Handling- GUI Event Types and Listener Interfaces - layout manager, Swings Vs AWT

MODULE – IV

Files, Streams & I/O – Introduction – Files & Streams – Sequential Access Text Files

MODULE – V

Introduction to Multi-Threading , Thread life cycle, Thread priorities. Introduction – Applets & Java Web Start – applet life-cycle, HTML tags, a simple applet program

Text Books:

Paul Deital & Harvey Deital, "Java: How to Program", Pearson Education, 10th edition, 2015.

OBJECT ORIENTED PROGRAMMING USING JAVA LAB

LIST OF EXERCISES

1. Program to illustrate class and objects.
2. Program to illustrate control structures (if-then, while, switch).
3. Program to illustrate arrays (creation, initialization and processing).
4. Program to illustrate Constructor and its overloading.
5. Program to illustrate Inheritance and Packages.
6. Program to illustrate Interface and static methods.
7. Program to illustrate Exception Handling Technique with IO streams
8. Program to illustrate File handling technique.
9. Program to illustrate Swing Application
10. Program to illustrate applets using HTML

Paper Code: CSCS233
COMPUTER NETWORKS

L	T	P
3	0	0

Pre-requisite: Basic Knowledge of Computers

Objectives:

- To educate the functions of various OSI layers in detail

Outcomes:

- Knowledge of OSI Layers in Computer Network.
- Ability to identify transmission media, types and topologies of network. Familiarization with the techniques of error detection and congestion control

MODULE –I

Introduction –Uses of Networks, Network hardware, Network Software, Network Reference Models, Example Networks.

MODULE –II

Physical Layer: Transmission Media: Guided, Wireless and Communication satellites – Multiplexing and Switching.

MODULE –III

Data Link Layer: data link Layer Design issues, Error Detection and correction, Simplex Stop-and-wait protocol, Sliding window protocols

MODULE –IV

Network Layer –Design issues, Routing Algorithms: Optimality Principle, Shortest path algorithm, flooding, link state routing, Hierarchical routing, Broadcast, Multicast. Congestion Control Algorithms.

MODULE –V

Transport Layer – Elements of Transport Protocols, Internet Transport protocols: UDP, TCP
Application Layer – Domain Name System –Electronic Mail

SOFTWARE ENGINEERING

Pre-requisite: Basic knowledge of programming

Objectives:

- To gain knowledge about software development life cycle models, software design, implementation, and testing of software.
- To gain overall knowledge of how software is developed

Outcomes:

- Understanding of various methods or models for developing a software product.
- Ability to analyze existing system to gather requirements for proposed system. Skill to design and code a software.

MODULE -I

Introduction to Software Engineering – evolving role of software – defining software engineering – changing nature of software – software myths – terminologies – role of software development – software life cycle models – build & fix model – waterfall model – incremental model – evolutionary model – unified model – selection of a life cycle model.

MODULE -II

Software Cost Estimation: Software cost factors - Software Cost Estimation Techniques -Staffing-level Estimation -Estimating Software Maintenance Costs -The Software Requirements specification - Formal Specification Techniques - Languages and Processors for Requirements Specification.

MODULE -III

Software Design: Fundamental Design Concepts - Modules and Modularization Criteria -Design Notations –Design Techniques -Detailed Design Considerations -Real-Time and Distributed System Design -Test Plans -Milestones, walkthroughs, and Inspections.

MODULE -IV

Implementation issues: Structures Coding Techniques -Coding Style -Standards and Guidelines – Documentation guidelines -Type Checking -Scoping Rules –Concurrency Mechanisms.

MODULE -V

Software testing – strategic approach to software testing – terminologies – functional testing – structural testing – levels of testing – validation testing – the art of debugging – testing tools

PROGRAMMING WITH VISUAL BASIC

Pre-requisite: Knowledge of any programming language

Objectives:

- To introduce students Event Driven Programming.
- To help the students to find solution to real life problems using Visual Basic.NET
- Students will learn about connecting and accessing databases.

Outcomes:

- Understand Forms, module, components, menu editor and its concepts. Usage of controls such as text box, buttons, checkbox etc and control them through codes.
- Ability to develop simple project with database using data source.

MODULE I

Introduction to .net framework -Visual Programming, VB.net- Features, IDE- Menu System, Toolbars, Code Designer, Solution Explorer, Object Browser, Toolbox, Class View Window, Properties Window, Server Explorer, Task List, Output Window, Command Window.

MODULE II

Data Types, Keywords, Declaring Variables and Constants, Operators, Conditional Statements- Looping Statement. Arrays- Static and Dynamic . Functions and Procedures- Built-In Functions- Mathematical and String Functions .Object Oriented Programming- Creating Classes, Objects, Properties, Methods, Events, Constructors and destructors, Exception Handling.

MODULE III

Properties, Events and Methods of Form, Label, TextBox, ListBox, Combo Box, RadioButton, Button, Check Box, Progress Bar, Date Time Picker, Calendar, Picture Box, HScrollbar, VScrollbar, Group Box, ToolTip, Timer.

MODULE IV

Menus and toolbars- Menu Strip, Tool Strip, Status Strip, Built-In Dialog Boxes –Open File Dialogs, Save File Dialogs, Font Dialogs, Color Dialogs, Print Dialogs, InputBox, Msg Box, Interfacing With End user- Creating MDI Parent and Child.

MODULE V

Introduction to ADO.NET: ADO.Net Object Model, Data Provider, DataSet, Connecting to database, Reading data into a data cell: the dataset class, finding tables, rows, column values, column definition, adding, deleting and updating rows, writing updates back to data source.

Text Books:

DATABASE MANAGEMENT SYSTEM

Prerequisite: Knowledge of data structures and file-handling

Objectives:

- To learn the fundamental concepts of Database management systems.
- To learn SQL commands to manage data and PL/SQL.

Outcomes:

- Understand data modeling and database development process. Construct and normalize conceptual data models.
- Implement a relational database into a database management system. Become proficient in using database query language.

MODULE I:

Introduction to Database System- Objectives- Entities and Attributes – Data Models

MODULE II :

Database Management Systems – Tree Structures – Plex Structures – Data Description Languages. Relational Databases – Third Normal Form – Canonical Data structures - Varieties of data independences.

MODULE III:

Basic SQL reports and commands – Datatypes and notations – String functions – Data functions – Unions – Joins – DDL – DML – DLL.

MODULE IV:

PL/SQL: Approach and Advantages –PL/SQL Blocks -Variables-Manipulating Data – Triggers – Procedures, functions and packages - Exception handling

MODULE V:

Locking Techniques – Time stamp ordering – Validation techniques - Granularity of data items – Recovery Concepts - log based Recovery – Database Security issues – Access Control – Statistical Database Security.

VISUAL PROGRAMMING & DBMS LAB

LIST OF EXERCISES:

1. Building simple applications.
2. Working with controls.
3. Application with multiple forms.
4. Application with dialogs
5. Application with Menus
6. Develop any TWO case studies listed below:
 - i) Students marksheet processing
 - ii) Electricity bill processing
 - iii) Bank Transaction
 - iv) Payroll processing
 - v) Gas booking and delivery
 - vi) Library information system

Paper Code: CSCS351

WEB TECHNOLOGY

Pre-requisite: Knowledge of Operating system, computer network, DBMS, and Java .

Objectives:

- To gain knowledge in HTML and DHTML
- To design interactive web pages using Style sheets, Java-script and ASP.

Outcomes:

- Understand the various steps in designing Creative and dynamic website.
- Ability to write HTML, JavaScript, CSS and ASP.

MODULE – I

Introduction to Internet – The World Wide Web – Web Browsers, Web Servers, Uniform Resource locators, Multipurpose Internet mail extensions. HTTP Request Message - HTTP Response Message.

MODULE – II

Introduction to HTML – Elementary tags in HTML – List in HTML – Displaying Text in Lists – Using Ordered List – Using Unordered Lists- HTML Description Lists - Nested HTML Lists, Control List – Combining List Types – Graphics and Image Formats – Graphics and HTML document- image and hyperlink anchors – Image maps – Tables – Frames – Forms.

MODULE – III

Introduction to DHTML – Introduction to style sheets – Setting the default style sheet language – Inline style information – External Style sheets – Cascading Style sheets.

MODULE – IV

Introduction to Java script - script tag, interactive data, DOM, A simple document, Add a form, Add a text input element, Add a button element, properties, methods and event handlers. Scripts and HTML.

MODULE – V

Introduction to ASP – Database Management with ASP: Database access with ADO, working with ADO's Connection object, Using Command objects, Working with ADO's Recordset Object.

MICROPROCESSORS AND MICROCONTROLLERS

Prerequisite: Knowledge of computer organization

Objectives:

- To understand the architectures and the instruction set of 8085 microprocessor
- To understand the architectures and the instruction set of 8051 microcontroller

Outcomes:

- Get clear idea about the architectures and instruction set of microprocessor and microcontroller.
- Do the arithmetic operation, logical operations and code conversion

MODULE – I

Intel 8085 Microprocessor: Introduction - Need for Microprocessors – Evolution – Intel 8085 Hardware - Architecture – Pin description - Internal Registers – Arithmetic and Logic Unit – Control Unit – Instruction word size

MODULE – II

Addressing modes – Instruction Set – Timing Diagrams. Evolution of Microprocessors – 16-bit and 32-bit microprocessors. Intel 8085 Interrupts and DMA: 8085 Interrupts – Software and Hardware Interrupts – 8259 Programmable Interrupt Controller –

MODULE – III

Data Transfer Techniques – Synchronous, Asynchronous and Direct Memory Access (DMA) and 8237 DMA Controller- 8253 Programmable Interval Timer.

MODULE – IV

Memory & I/O Interfacing: Types of memory – Memory mapping and addressing – Concept of I/O map – types – I/O decode logic – 8279 Interfacing key switches and LEDs – 8255 Programmable Peripheral Interface –

MODULE – V

Microcontroller: Intel 8051 Microcontroller: Introduction – Architecture – Memory Organization – Special Function Registers – Pins and Signals – Timing and control – Port Operation – Memory and I/O interfacing – Interrupts – Instruction Set and Programming.

Text Books:

Krishna Kant, “Microprocessors and Microcontrollers – Architectures, Programming and System Design 8085, 8086, 8051, 8096”, PHI, 2013.

MICROPROCESSOR LAB

LIST OF EXERCISES

1. Basic Arithmetic and Logical Operations Addition
2. Basic Arithmetic and Logical Operations Subtraction
3. Basic Arithmetic and Logical Operations Multiplication
4. Basic Arithmetic and Logical Operations Division
5. Move a Data Block Without Overlap
6. Code Conversion- Arithmetic Operations.
7. Code Conversions –Decimal to Hexadecimal
8. Code Conversion – Hexadecimal to Decimal
9. Floating Point Operations
10. Ascending & Descending operation

0	1	10

PROJECT

Objective

The objective of the project is to motivate them to work in emerging/latest technologies, help the students to develop ability, to apply theoretical and practical tools/techniques to solve real life problems related to industry, academic institutions and research laboratories.

Outcome

The course outcome is the ability of the student to apply Software Development Cycle to develop a software module. The student will be able to use the techniques, skills and modern software engineering tools necessary for software development. Develop a software product along with its complete documentation.

The project is of 2 hours/week for one (semester VI) semester duration and a student is expected to do planning, analyzing, designing, coding, and implementing the project. The initiation of project should be with the project proposal. The synopsis approval will be given by the project guides.

The project proposal should include the following:

- Title
- Objectives
- Input and output
- Details of modules and process logic
- Limitations of the project
- Tools/platforms, Languages to be used
- Scope of future application

The project work should be either an individual one or a group of not more than three members and submit a project report at the end of the semester. The students shall defend their dissertation in front of experts during viva-voce examinations.

DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS

Specialization Stream – I [ADVANCED COMPUTING STREAM]

Paper Code: CSCS243

L	T	P
3	1	2

CLIENT/SERVER COMPUTING

Prerequisite: Knowledge of computer networks & DBMS

Objectives:

- To learn about objective evaluations and details of Client/Server development tools, used in operating system and database management system
- To learn the basics of middleware architecture

Outcomes:

- Understand the objective evaluations and details of Client/Server development tools, used in operating system and database management system
- Get an idea about the basics of middleware architecture

MODULE – I

Introduction – defining client/server computing – Classification of client/server systems – clients/server – advantages & disadvantages –driving forces behind client/server computing

MODULE – II

Architectures of client/server systems – introduction – components – principles behind client/server systems – client components – server components – communication middleware components – architecture for business information system – existing client/server architecture

MODULE – III

Client/Server databases – Introduction – client/server in respect of databases – client/server database architecture – database middleware component – access to multiple databases – distributed client/server database systems – distributed DBMS – web/database system for client/server applications

MODULE – IV

Client/server application components – introduction – technologies for client/server application – services of a client/server application – categories of client/server applications – client services – server services – client/server application connectivity – client/server application: Layered Architecture

MODULE - V

System development – hardware & software requirements – communication interface technology – client/server technology & web services – what are web services – web services & client/server/browser – server technology – client/server technology & web applications

Text Book:

Subhash Chandra Yadav & Sanjay Kumar Singh, "An Introduction to Client/Server Computing", New Age International Publishers, 2009.

Paper Code: CSCS352

L	T	P
3	1	2

DISTRIBUTED COMPUTING

Prerequisite: Knowledge of Database and Networks.

Objective

- To make the students to understand the collaborative operations of collections of computer systems.

Outcomes

- Understand the collaborative operations of collections of computer systems.

MODULE I

Introduction – Examples of Distributed Systems–Trends in Distributed Systems
– Focus on resource sharing – Challenges - Case study: World Wide Web.

MODULE II

System Model – Inter process Communication - the API for internet protocols –
External data representation and Multicast communication - Network
virtualization: Overlay networks. Case study: MPI

MODULE III

Remote Invocation – Introduction - Request-reply protocols - Remote procedure
call - Remote method invocation - Group communication

MODULE IV

Publish-subscribe systems - Message queues - Shared memory approaches -
Distributed objects - Case study

MODULE V

Distributed File Systems –Introduction - File service architecture - Distributed
mutual exclusion – Elections

Text Book:

George Coulouris, Jean Dollimore, Tim Kindberg, “Distributed Systems
Concepts and Design”, Addison Wesley, 5th edition, 2011.

Paper Code: CSCS363

L	T	P
3	1	2

CLOUD COMPUTING

Prerequisite: Knowledge of operating system, distributed system.

Objectives:

- To impart the principles and paradigm of Cloud Computing
- To comprehend the Cloud Computing architecture and implementation

Outcomes

- Understand the principles and paradigm of Cloud Computing
- Get an idea about the Cloud Computing architecture and implementation

MODULE – I

Computing Paradigms - Cloud Computing Fundamentals - Motivation for Cloud Computing - Defining Cloud Computing - Principles of Cloud computing - Cloud Ecosystem - Requirements for Cloud Services - Cloud Application - Benefits and Drawbacks - Cloud Computing Architecture and Management Cloud Architecture - Anatomy of the Cloud- Network Connectivity in Cloud Computing - Applications on the Cloud- Managing the Cloud .

MODULE – II

Cloud Deployment Models – Introduction - Private Cloud - Public Cloud- Hybrid Cloud- Cloud Service Models- Infrastructure as a Service- Platform as a Service- Software as a Service

MODULE – III

Virtualization - Approaches to Virtualization- Hypervisors

MODULE – IV

From Virtualization to Cloud Computing- Programming Models for Cloud Computing

MODULE – V

Software Development in Cloud Introduction - Different Perspectives on SaaS Development - New Challenges - Cloud-Aware Software Development Using PaaS Technology

Text Book:

K.Chandrasekaran, “Essentials of Cloud Computing“, CRC Press, Taylor & Francis Group, 2015.

DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS

Specialization Stream – II [BUSINESS INTELLIGENCE STREAM]

Paper Code: CSCS244

L	T	P
3	1	2

DATA WAREHOUSING

Pre-requisite: Knowledge of database management system.

Objectives:

- To learn the fundamentals of data warehouses
- To study the architecture, design, hardware and planning of a data warehouse.

Outcomes:

- Acquire knowledge in the fundamental concepts, benefits and problem areas associated with data warehousing. Understand the various architectures and main components of a data warehouse.
- Ability to design a data warehouse, and be able to address issues that arise when implementing a data warehouse.

MODULE I

Introduction: Data Warehouse-History, Difference between Database and Data Warehouse – Differences between OLTP Systems and Data Warehouse– working of Data warehouse – General stages of Data Warehouse– Need for Data warehouse – Advantages & Disadvantages– Steps to Implement Data Warehouse –Applications– Types.

MODULE II

Data Warehouse Architecture: Concepts and Components: Data warehouse Characteristics– Data Warehouse Architectures– Data warehouse Components: Data Warehouse DB, ETL, Metadata, Query Tools – ETL: Need, ETL Process: Extraction, Transformation, Loading, ETL Tools, ETL vs ELT. Data mart: need for data mart, its types, steps to implementing data mart, Advantages & Disadvantages.

MODULE III

Design aspects: Data Modeling –Need for Data Model - Types of Data Models: Conceptual Model, Logical Data Model, Model Advantages, OLAP: OLAP, Characteristics, Basic analytical operations of OLAP, Steps in the OLAP Creation Process, Advantages & Disadvantages.

MODULE IV

Hardware and operational design: server hardware, network hardware, Client hardware – Physical layout: parallel technology, Disk technology, Database layout, File systems – Security – introduction to Service level Agreement.

MODULE V

Planning and Development: Capacity planning – Estimating the load – Tuning the data warehouse – Assessing performance –Tuning the data load and queries – Testing data warehouse – Development of test plan – Testing the data base and operational environment.

TEXT BOOKS:

1. Sam Anahory & Dennis Murray, “Data Warehousing in the real world”, Pearson Education, 2008
2. Prabhu C.S.R, “Data Warehousing: Concepts, Techniques, Products and Applications”, PHI Learning, 3rd edition, 2009

Paper Code: CSCS253

L	T	P
3	1	2

DATA MINING

Prerequisite: Knowledge of Data Warehouse.

Objectives:

- To understand the concepts of Data Mining.
- To learn about Classification, prediction and cluster analysis techniques.

Outcomes:

- Acquire knowledge to compare and contrast OLAP and data mining as techniques for extracting knowledge from a data warehouse.
- Implement data mining techniques like clustering, association rule and decision tree etc on the real data set.

MODULE I

Introduction to Data Mining: Definition of data mining - Stages of the Data Mining Process – Basic data types – Major building blocks –Scope of Data Mining – Data Mining working – Data Mining Architecture – Data Mining implementation process – Data Mining Techniques – Advantages & Disadvantages.

MODULE II

Data: Types of Data, Data quality, Data preprocessing- Measures of similarity and dissimilarity – Exploring data: summary statistics, visualization, OLAP and multi-dimensional data analysis.

MODULE III

Data preprocessing: Data preprocessing introduction, Data cleaning - Data integration - Data reduction – Data transformation and data Discretization.

MODULE IV

Classification: Problem definition - General approach - Decision tree induction - Rule based classifiers – nearest neighbor - Bayesian classifiers - Pattern Mining – Introduction- pattern mining in multilevel, multi-dimensional space - Frequent Pattern Mining Model.

MODULE V

Cluster analysis basic concepts and methods: Introduction – requirements for cluster analysis – Over view of clustering methods. Data mining Applications – Data Mining Tools

TEXTBOOKS:

1. Data Mining: Concepts and Techniques by Jiawei Han and Micheline Kamber, Elsevier, 2010.
2. Introduction to Data Mining by Pang-Ning Tan, Michael Steinbach and Vipin Kumar, 2005.

L	T	P
3	1	2

FOUNDATIONS OF DATA ANALYTICS

Pre-requisite: Knowledge of Data Mining.

Objectives:

- To learn to explore data, sample and model them
- To gain knowledge about Big Data and analyse them.

Outcomes:

- Understand need for big data and its associated methodologies
- Understand the various techniques to analyze and learn from data

MODULE - I

Introduction to Data Science: Definition of Data Science, Need for Data Science, components of data science - Data science process – Introduction to NoSQL.

MODULE II

Business Intelligence Systems Application and Development: BIG DATA Overview: Types, Characteristics, Architecture, BI vs Data Science - Data Analytics Life Cycle - Big Data Analytics: Methodology - Technologies – Advantages.

MODULE III

Big data Management - Operational Databases: importance of RDBMS in Big Data Environment, Non-Relational databases, key value pair database, document database, columnar database, graph database, spatial database

MODULE - IV

MapReduce Fundamentals: Tracing the Origins of MapReduce, Understanding the map Function, Adding the reduce Function, Putting map and reduce Together, Optimizing MapReduce Tasks.

MODULE V

Introduction to Machine Learning for Data Analysis: Introduction: Need, Types of ML learning algorithms: Supervised and Semi-supervised, Unsupervised, reinforcement.

TEXT BOOKS:

1. Davy Cielen, Arno D. B. Meysman, Mohamed Ali, “Introducing Data Science”, manning publications, 2016 (Chapter 1 to 3 for Module I & Module V)
2. “Data Science and Big Data Analytics”, EMC Education Service, Wiley. 2015 (Chapter 1 & Chapter 2 for module II)
3. Alan Nugent, Dr. Fern Halper, Marzia Kaufman, “Big Data for Dummies”, by Judith Hurwitz, , Wiley pub, 2013. (Chapter 7 & 8 for module III and IV)
4. Rudolph Russell, “Machine Learning Step-by-Step Guide To Implement Machine Learning algorithms with Python”, 2018. (Chapter I for module V)

DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS

Specialization Stream – III [SOFTWARE ENGINEERING STREAM]

Paper Code: CSCS245

L	T	P
3	1	2

OBJECT ORIENTED SYSTEM DESIGN

Prerequisite: Knowledge of object oriented programming

Objectives:

- Understand software modeling and Architectural Concepts
- Understand and apply UML notations in designing software
- Gain knowledge about Static and Dynamic modeling

Outcomes:

- Ability to develop the design phase of software development using UML

MODULE 1

System development - object basics - development life cycle - methodologies - patterns - frameworks - unified approach - UML.

MODULE 2

Use - Case models - object analysis - object relations - attributes - methods, class and object responsibilities

MODULE 3

Design processes - design axioms- class design - object storage - object interoperability

MODULE 4

PO User interface design - view layer classes - micro - level processes - view layer interface

MODULE 5

Quality assurance tests - testing strategies - object orientation on testing - test cases - test plans - continuous testing - debugging principles - system usability - measuring user satisfaction - case studies.

Text books:

1. Ali Bahrami, "Object Oriented Systems Development using the unified modeling language", 1st edition, TMH, 2008.
2. Grady Booch, James Rumbaugh, Ivar Jacobson, "The Unified Modeling Language User Guide", 2nd edition, Pearson Education, 2007.

Paper Code: CSCS354

L	T	P
3	1	2

SOFTWARE TESTING

PRE-REQUISITE: Knowledge in Software Engineering.

Objectives:

- To understand the Concepts of Software Testing.
- Introducing about various Testing Tools.

Outcomes:

- Understand the problems of defects and need of Testing
- Acquire knowledge about various testing strategies that are used in the industries to test their products

MODULE – I

Objectives of Testing - The Psychology of Testing – Economics of Testing – Software Testing Principles– Testing as a phase of SDLC- Software testing life cycle.

MODULE – II

Developing a test case: Testing Strategies – White Box Testing Techniques: Statement Coverage – Branch Coverage - Condition Coverage – Multiple Condition Coverage – Data flow Coverage- loop coverage. Black Box Testing Techniques: Boundary Value Analysis – Decision tables - Equivalence Partitioning - State based or graph based testing.

MODULE- III

Levels of Testing: Unit Testing – Integration Testing: Top down integration and bottom up integration – System Testing: overview – functional Vs Non-functional testing – Functional testing: Design Verification, Business vertical testing, deployment testing and Beta Testing. Non-functional Testing: Scalability testing, reliability testing, stress testing and interoperability testing - Acceptance testing.

MODULE - IV

Regression Testing: Types- smoke test – criteria for selecting the test case – classifying test case – selecting test case – resetting the test case for regression testing – concluding the results – best practices.

MODULE - V

Software Test Automation: Approaches to Automation: partial automation, full automation- Choosing the right tool - Challenges in software test automation.

Text Books

1. Glenford J. Myers, Correy Sandler et. el, “The Art of Software Testing”, John Wiley & Sons, 2011. (Chapter 1 for module 1)
2. Srinivasan Desikan, Gopaldaswamy Ramesh, “Software Testing Principles and Practices”, Pearson Education, 2008. (Chapters 3,4,5,6,8,16.8,16.10 for modules 2, 3,4,5)

L	T	P
3	1	2

SOFTWARE QUALITY MANAGEMENT

Prerequisite: Knowledge of software engineering

Objectives

- To learn how to apply quality assurance tools & techniques
- To learn about standards and certifications

Outcomes:

- Able to understand the importance of quality and standards
- Understand various models of dealing with software quality

MODULE - I

Introduction, Environment, Characteristics, tasks and Goals, Software Quality Challenge - Software Quality requirements, factors: McCall's factor model, - Components of the Software Quality Assurance System : SQA Architecture, Pre-Project Components – Software PLC components.

MODULE - II

Integrating Quality Activities in the Project Life Cycle – Reviews - Assuring the Quality of Software Maintenance components - Case Tools and their effect on Software Quality.

MODULE - III

Software Quality Infrastructure Components - Procedures and Work Instructions – Staff Training and Certification - Software Configuration Management - Documentation Control.

MODULE - IV

Software Quality Management Components - Project Progress Control - components of project progress control- Progress control of internal projects and external participants- Implementation of project progress control

MODULE - V

Software Quality Metrics - Objectives of quality measurement- Classification - Product metrics – Implementation – limitation; scope of quality management standards: ISO 9000 family, CMM and CMMI.

TEXT BOOK

1. Daniel Galin, “Software Quality Assurance: From Theory to Implementation” - Pearson Addison-Wesley, 2012.

REFERENCE BOOKS

1. Kshirasagar Naik and Priyadarshi Tripathy, “Software Testing and Quality Assurance”, John Wiley, 2008.
2. Allen Gilles, “Software quality: Theory and management”, 2nd edition, Cengage Learning, 2003.

DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS

Specialization Stream – IV [INFORMATION SECURITY STREAM]

Paper Code: CSCS246

L	T	P
3	1	2

INFORMATION SECURITY

Prerequisite: Basic knowledge of computers

Objectives:

- To provide an understanding of principal concepts, major issues, technologies and basic approaches in information security.

Outcomes:

- Understand the history and the need for information security.
- Acquire knowledge about legal and ethical aspects of information security and risk control strategies.

MODULE – I

Introduction – History of Information Security – defining security – CNSS Security Model – Components of an Information Security – Approaches to Information Security Implementation – System Development Life Cycle.

MODULE – II

The Need for Security – Introduction - Business Needs First – Threats – Attacks - Secure Software Development

MODULE – III

Legal, Ethical, and Professional Issues in Information Security - Law and Ethics in Information Security - Relevant U.S. Laws - International Laws and Legal Bodies.

MODULE – IV

Ethics and Information Security - Codes of Ethics and Professional Organizations - Risk Management - Introduction - An Overview of Risk Management – Risk Identification - Risk Assessment.

MODULE – V

Risk Control Strategies - Selecting a Risk Control Strategy - Quantitative Versus Qualitative Risk Control Practices - Risk Management Discussion Points

TEXT BOOK:

1. Michael E. Whitman & Herbert J. Mattord, “Principles of Information Security”, Course Technology, Cengage Learning, 4thedition, 2011. (Chapters 1,2,3,4,5)

Paper Code: CSCS355

L	T	P
3	1	2

NETWORK SECURITY

Prerequisite: Knowledge of & computer networks.

Objectives:

- To learn Computer Network Vulnerabilities
- To learn how to deal with Network Security Challenges and counter measures

Outcomes:

- familiarization with the benefits and issues regarding Network Security
- Ability to understand the threat and deal with vulnerabilities

MODULE – I

Computer Network Fundamentals - Introduction - Computer Network Models- Computer Network Types - Data Communication Media Technology - Network Topology -Network Connectivity and Protocol - Network Services.

MODULE – II

Understanding Network Security - Defining Network Security - Security Services - Security Standards - Elements of Security - Security Threats to Computer Networks- Sources of Security Threats - Security Threat Motives - Security Threat Management - Security Threat Correlation

MODULE – III

Security threats to Computer Networks: Sources of security threats, Threat motives, Security threat management. Computer Network Vulnerabilities - Sources of Vulnerabilities- Vulnerability Assessment.

MODULE – IV

Dealing with Network Security Challenges - Access Rights - Access Control Systems – Authorization - Types of Authorization Systems – Authorization principles, Authorization granularity.

MODULE – V

Authentication - Multiple Factors and Effectiveness of Authentication - Authentication Elements Types of Authentication - Authentication Methods Developing an Authentication Policy. Introduction to firewalls - Types of Firewalls.

TEXT BOOK

1. Joseph Migga Kizza, “Computer Network Security”, Springer, 2005. (Chapter 1,2,3,4,8,9)

ETHICAL HACKING

Pre-requisite: Knowledge of Networks

Objectives:

- Understanding need for Ethical Hacking
- Understanding the procedure for hacking and malware attacks

Outcomes:

- Acquire knowledge of ethical hacking, need and procedure.
- Understand various malwares and hacking methodologies.

MODULE I

Introduction to Ethical Hacking : Defining hacker, Ethical Hacking, Understanding the Need to Hack Your Own Systems, Understanding the Dangers Your Systems Face, Nontechnical attacks Network-infrastructure attacks, Operating system attacks, Application and other specialized attacks, Obeying the Ethical hacking Commandments, Working ethically Respecting privacy Not crashing your systems, The Ethical hacking Process: Formulating your plan, Selecting tools Executing the plan, Evaluating results.

MODULE II

Cracking the Hacker Mindset: Determining who you're up against, who hacks, why hackers hack. Planning and Performing Attacks, Maintaining Anonymity, Developing Your Ethical Hacking Plan, Getting Your Plan Approved, Establishing Your Goals, Determining What Systems to Hack, Creating Testing Standards: Timing, Specific tests, Blind versus knowledge assessments, Location, Reacting to major exploits that you find, Silly assumptions, Selecting Tools.

MODULE III

Hacking Methodology : Setting the Stage, Seeing What Others See, Gathering public information, Mapping the network, Scanning Systems, Hosts, Modems and open ports, Determining What's Running on Open Ports, Assessing Vulnerabilities, Penetrating the System

MODULE IV

Putting Ethical Hacking in Motion: Social Engineering, Why Hackers Use Social Engineering, Understanding the Implications, Performing Social-Engineering Attacks: Fishing for information, Building trust, exploiting the relationship. Social-Engineering Countermeasures: Policies, awareness.

MODULE V

Implications of Malware Attacks, Types of Malware: Trojan horses, Viruses, Worms, Rootkits, Spyware, Built-in programming interfaces, Logic bombs Security tools, How Malware Propagates: Automation, E-mail, Hacker backdoors, Testing: Vulnerable malware ports, Manual assessment, Antivirus software testing, Network scanning, Behavioral-analysis tools, Malware Countermeasures: General system administration, E-mails, Files.

DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS

Specialization Stream – V [SCIENCE OF PROGRAMMING LANGUAGE STREAM]

Paper Code: CSCS247

L	T	P
3	1	2

PRINCIPLES OF PROGRAMMING LANGUAGES

Prerequisite: Knowledge of programming

Objectives:

- To understand the constructs of programming language
- To know the different programming paradigms

Outcomes:

- Get the clear idea about the construction of Programming language
- Use different programming paradigms in and application

MODULE - I

The challenge of programming language design - Criteria for language design-some possible solutions - Defining syntax: General problem of describing syntax, formal methods of describing syntax, BNF, Syntax Graphs - Syntax and program Reliability.

MODULE - II

Variables, Expressions and statements - Variables and assignment statement, Binding Time and Storage Allocation, Constants and initialization, Expressions, Statements-Conditional, Iteration - GOTO and Labels – Types - Data types and Typing. Enumerated and elementary, pointer, structured Data types, Type coercion & Equivalence - Scope and Extent

MODULE - III

Procedures - General features, Parameter evaluation & passing, Call-By-Name, Specification of objects in a procedure, aliasing, Overloading, Generic functions, Co-routines - Abstract data types - concept of abstraction, Encapsulation, Introduction to data abstraction, design issues, parameterized abstract data types.

MODULE - IV

Exception Handling - Introduction, Exception Handling in PL/I, Exception Handling in Ada, Exception Handling in C++ - Concurrency - Basic concepts, subprogram-level concurrency, statement-level concurrency, semaphore, Monitors, Message passing.

MODULE - V

Case Studies: Functional programming Languages- Introduction- Mathematical functions- functional programming languages – LISP - Application of functional languages- Logic programming Languages – Introduction to predicate Calculus - An overview of logic programming- Applications of logic programming

Text Books

1. Ellis Horowitz, “Fundamentals of programming languages”, 2nd Edition Galgotia Publications,
2. Robert W. Sebesta, “Concepts of programming languages”, 10th edition, Pearson.

Paper Code: CSCS356

L	T	P
3	1	2

SYSTEM SOFTWARE

Prerequisite: Knowledge of computer organization and programming

Objectives:

- To understand the functions of assemblers, loaders, linkers, macro-processors and compilers.

Outcomes:

- Understand the importance of assemblers, loaders, linkers, macro-processors and compilers
- Know the working principles of assemblers, loaders, linkers, macro-processors and compilers

Module – I

Introduction: System software and machine architecture, traditional (CISC) machines, RISC machines.

Module - II

Assemblers: Basic assembler functions, machine dependent and machine independent assembler features, one-pass assemblers, multi pass assemblers, MASM assembler, SPARC assembler.

Module - III

Loaders and Linkers: Basic loader functions, machine dependent and machine independent loader features, linkage editors, dynamic linking, bootstrap loaders.

Module - IV

Macro Processors: Basic macro processor functions, machine dependent and machine independent macro processor features, macro processor design options.

Module - V

Compilers: Basic compiler functions, machine-dependent compiler features, machine-independent compiler features, compiler design options the YACC compiler-compiler.

Text Books:

1. Leland L Beck, Manjula D, “System Software An Introduction To Systems Programming”, Pearson Education, 3rd edition, 2016.
2. A.V. Aho, R. Semi, J.D. Ullman, “Compilers - Principles, techniques and tools”, 2nd edition, Pearson Education, 2008.

Paper Code: CSCS367

L	T	P
3	1	2

PRINCIPLES OF COMPILER DESIGN

Prerequisite: Knowledge of system software and principles of programming

Objectives:

- To gain basic features of compilers
- To gain knowledge on data structures required for designing compilers

Outcomes:

- Understand the phases of compilers in detail
- Know how the data structures are used in compilers

MODULE - I

Introduction to Compiler – Compilers – Analysis of the source program – Phases of compiler – cousins of the compiler – grouping of phases – compiler construction tools – simple one pass compiler – overview – syntax definition – syntax directed translation – parsing – lexical analysis – incorporating symbol table

MODULE - II

Lexical analysis – role of lexical analyzer – input buffering – specification of tokens – recognition of token – finite automata – from a regular expression to NFA – design of a lexical analyzer generator – optimization of DFA based pattern matches

MODULE - III

Syntax Analysis – role of the parser – top-down parsing – bottom-up parsing – operator precedence parsing – LR parsers – using ambiguous grammar – syntax directed translation – syntax directed definitions – construction of syntax trees

MODULE - IV

Runtime environment – source language issues – storage organization – storage allocation strategies – storage allocation in C, parameter parsing – intermediate code generation – intermediate languages – declaration – assignment statements

MODULE - V

Code generation – issues in the design of a code generator – runtime storage management – basic blocks and flow graph – register allocation and assignment – DAG representation of basic blocks, generating code from DAGs- introduction to code generation.

Text Book:

A.V. Aho, R. Semi, J.D. Ullman, “Compilers - Principles, techniques and tools”, 2nd edition, Pearson Education, 2008

OPEN ELECTIVE-I

Paper Code: CSCS701

L	T	P
3	0	0

BUSINESS COMMUNICATION

Pre-requisite: Basic knowledge in English.

Objectives:

- To understand and learn to communicate effectively
- Learn to write business reports and letters

Outcomes:

- Understand the importance of communication and able to communicate business deals verbally and non-verbally
- Acquire knowledge to write efficient business reports and equip to appear for interviews

MODULE I

The fact and meaning of communication: the need for communication, the communication process, interpersonal communication, business communication, characteristics of business communication, many meaning of communication; direct communication, non-direct of written communication, non-method of communication, non-verbal communication, visual communication, audio-visual communication, Tele-communication.

MODULE II

Objectives of communication process, types of communication-internal and external communication, formal and informal channels, the grapevine, internal communication networks, downward communication, upward communication, horizontal communication, barriers to communication and how to handle them.

MODULE III

Public relations advertising- concepts and types, interviews: types and techniques, meetings, committees, conference and communication problems.

MODULE IV

Business reports, memoranda and representation, business correspondence: theory principles of business correspondence, parts of a letter, forms / formats of letters.

MODULE V

Business correspondence in practice- applications, reference, testimonials, appointments, confirmation, promotion, termination, resignation enquiries and replies, orders and acknowledgements, circulars, public speaking, precise writing.

TEXT BOOK

1. Rajendra Pal & J.S. Korlahalli, “Essentials of Business Communications”, Sultan Chand& Sons, 2017
2. M.K. Sehgal, Vandana Khetarpal, “ Business Communication”, 2nd edition Excel books, 2013

OPEN ELECTIVE - II

L	T	P
3	0	0

Paper Code: CSCS702

IT ENABLED SERVICES

Prerequisite: Knowledge of Information Technology

Objective:

- To understand importance of IT enabled services.
- To develop the ability to integrate various resources for optimization in the industry as well as for strategic utilization of IT enabled services and functions.

Outcomes:

- Understand the various IT business openings and strategies
- Acquire knowledge about various business models such as outsourcing

MODULE - I

Business Strategy: Challenges and Opportunities For IT - Business Strategy: Challenges and Opportunities in the Globalized, Interconnected, Convergent World, Establish Principles before Practice, IT Strategy, Application Strategy, Technology Strategy for IT, IT Management Strategy, Developing IT Strategy for Competitive Advantage, Stages of IT Strategy Development and Implementation, Challenges of IT and Business Strategy Alignment, Inhibitors of Business and IT Strategy Alignment, Three-D Framework for Business and IT Strategy Alignment.

MODULE – II

Strategic IT Planning - Business Implications for IT Strategic and Planning, Strategic IT Planning Motivations, SITP Process: Prevalent Planning Approaches, Difficulties in Developing and Executing SITP, Best Practices for Achieving Good SITP, SITP Approaches- Prevalent Researches.

MODULE – III

Enterprise IT Architecture – Challenges of EITA, Defining EITA, Need for EITA study, Contents of Typical Enterprise IT Architecture and Standards for Enterprise IT Architecture.

MODULE - IV

IT Application Strategy: Introduction, Need, COTS, COTS package selection life cycle, COTS implementation Strategy, Post implementation support and management.

MODULE – V

IT sourcing strategy: Introduction, Imperatives for outsourcing, motivation and need to outsource, Outsourcing and associated risk, IT management layers and considerations for outsourcing, strategic Vs generic sourcing, Business process outsourcing, process to succeed outsourcing contract management and governance.

Text Books:

1. Sanjiva Shankar Dubey, “ IT strategy and Management”, PHI, fifth edition, 2016 (Chapters: 1, 2, 4, 5, 6, 10)

OPEN ELECTIVE –III

Paper Code: CSCS703

L	T	P
3	0	0

TOTAL QUALITY MANAGEMENT

Prerequisite: Knowledge of Software Engineering and Software Quality Assurance.

Objectives:

- To learn how to understand the customer's perception and to satisfy the customer
- To understand process capability and Reliability concepts

Outcome:

- Understand the importance of quality from the customer perspective and translate to requirements
- Understand the significance of statistical tool in Quality

MODULE I

Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.

MODULE II

Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology.

MODULE III

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed. Process capability – meaning, significance and measurement – Six sigma - concepts of process capability. Reliability concepts – definitions, reliability in series and parallel, and product life characteristics curve. Total productive maintenance (TMP), Terotechnology. Business process Improvement (BPI) – principles, applications, reengineering process, benefits and limitations.

MODULE IV

Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation. Seven Tools (old & new). Bench marking and POKA YOKE.

MODULE V

Introduction to IS/ISO 9004:2000 – quality management systems – guidelines for performance improvements. Quality Audits. TQM culture, Leadership – quality council, employee involvement, motivation, empowerment, recognition and reward - TQM framework, benefits, awareness and obstacles.

TEXT BOOKS

1. Dale H. Besterfield, Carol Besterfield – Michna, Glen H. Besterfield, Mary Besterfield – Sacre, Hermant – Urdhwareshe, Rashmi Urdhwareshe, Total Quality Management, Revised Third edition, Pearson Education, 2011
2. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, First Edition 2002.

REFERENCES

1. Douglas C. Montgomery, Introduction to Statistical Quality Control, Wiley Student Edition, 6 th Edition, Wiley, 2008.
2. James R. Evans and William M. Lindsay, The Management and Control of Quality, Sixth Edition, Thomson, 2005.

OPEN ELECTIVE –IV

Paper Code: CSCS704

L	T	P
3	0	0

ARTIFICIAL INTELLIGENCE

Pre-requisite: Basic knowledge of algorithms.

Objectives:

- To study the concepts of Artificial Intelligence and Methods of solving problems using Artificial Intelligence

Outcomes:

- Understand concepts of artificial intelligence and underlying characteristics
- Learn various techniques of knowledge representation

MODULE-I

Introduction to Artificial Intelligence- definition - underlying Assumption - A.I Techniques - Space search - production system - control strategies - Heuristic search - problem characteristics - production system characteristics.

MODULE-II

Heuristic search techniques - Generate and test - Hill Climbing – best first search - problem reduction - Knowledge Representation issues: Representation and mapping - Approaches to Knowledge Representation - Issues in Knowledge Representation - Frame problem.

MODULE-III

Representing simple facts in logic - representing instance and Isa relationship-computable functions and predicates - resolution – frames - strong slot and filler structure Conceptual Dependency – scripts- advanced problem solving system.

MODULE-IV

Game playing - minimax search procedure - adding alpha beta cuts offs - additional refinements.

MODULE-V

Planning – An example Domain: the blocks world – components of planning system-goal-stack planning - Expert Systems: Definition of Expert Systems – Role of Expert Systems Knowledge Acquisition- example expert systems: MYCIN.

TEXT BOOK:

1. Artificial Intelligence - Elaine Rich, Kevin Knight, Shivasankar B.Nair –Third edition- McGraw Hill- 2017

REFERENCE BOOK:

1. Stuart Russel, Peter Norvig “AI – A Modern Approach”, 2nd edition, Pearson Education, 2007

OPEN ELECTIVE - V

Paper Code: CSCS705

3	0	0

INTRODUCTION TO E-BUSINESS

Pre-requisite: Basic knowledge of Information Technology

Objectives:

- This course introduces students to various aspects and models fore-business.
- At the end of the course, students should have an understanding of the impacts which e- business is having on society, markets and commerce.

Outcomes:

- Understand the various E-Business solutions available today such as E-Commerce and its mechanisms
- Acquire knowledge from e-governance to e-learning

MODULE I

Introduction E-Commerce (EC)- Definition and concept, EC Framework, Classification based on transaction, application, History–Digital Revolution, Business Environment, EC Business models: Structure, typical EC business models, Benefits and Limitation of EC.

MODULE II

EC mechanisms – E-Marketplaces: Components, Types, Mechanisms, Merchant Solutions, Auctions, Bartering and negotiating online, EC applications: Internet marketing and B2C electronic retailing: E-Tailing business models.

MODULE III

Online Travel and Tourism - Employment and Job Market Online - Online Real Estate - Online Publishing and e-Books Banking and Personal Finance Online - On-Demand Delivery Systems and E-Grocers - Online Delivery of products, Digital items, Entertainment and Gaming, B2B E-Commerce: Concepts, Characteristics, and Models

MODULE IV

From E-Government to E-Learning, Collaborative Commerce and C2C Commerce: E - Government- Definition and scope –G2C, G2B, G2G, Efficiency and effectiveness, Implementation of E-Government Services. E-Learning, E-Training and E-books: Definition- Benefits and drawbacks - Distance learning and Online Universities, Online corporate training, E-Books.

MODULE V

E-Commerce security, fraud issue and protection: Basic security issues, Technical malware attack methods: Virus to DoS, Nontechnical attack methods: Phishing to spam.

TEXT BOOK

1. Electronic Commerce: A Managerial Perspective, Turban, E. et al., Prentice Hall 2008. Chapters(1.1,1.2,1.3,1.7,1.8,2.1,2.2,2.5,3.2,3.1-3.7, 4.1, 5.1,5.2,10.1-10.4)

OPEN ELECTIVE - VI

Paper Code: CSCS706

FUNDAMENTALS OF ACCOUNTANCY

L	T	P
3	0	0

Pre-requisites: Basic knowledge in mathematics

Objectives:

- To understand the basic Accountancy.
- To understand concepts of cash maintenance and Cost Accounting.

Outcomes:

- Acquire knowledge about basic account for maintaining record in a company
- Understand to manage profit and loss and trading accounts so that the student can maintain an account register

MODULE -I

Accounting – Introduction-Meaning-Accounting and book keeping distinguished-objectives of accounting-Branches of accounting-accounting concepts and conventions-accounting standards in India-systems of Accounting

MODULE - II

Double entry system-personal accounts, real accounts, nominal accounts-journal-ledger-preparation of trial balance-rectification of errors.

MODULE –III

Subsidiary books including cash book, bank Reconciliation statement

MODULE –IV

Preparation of trading account- preparation of profit and loss account and balance sheet- Final accounts with adjustments

MODULE –V

Basics of cost Accounting – Basic Concepts- Elements of cost – prime cost – works cost – cost of production – concept of inventory – reorder level – minimum level – maximum level – average level – safety stock.

TEXT BOOKS

1. S.N. Maheswari, “Advanced Accountancy Vol I”, Vikas Publishing, 2009
2. R.L. Gupta, “Advanced accounting”, S. Chand & Co. New Delhi, 2010
3. Pillai and Baghawati, “Cost Accounting”, 2010
4. Jam and Narang, “Cost Accounting”, Kalyani Publications

OPEN ELECTIVE - VII

3	0	0

Paper Code: CSCS707

PRINCIPLES OF MANAGEMENT

Pre-requisites: No specific pre-requisite

Objectives:

- To understand the importance and functions of management
- To understand the purpose of planning and leadership

Outcomes:

- Understand the need for management and learn the nuances of management.
- Acquire knowledge about various form of organizations, their structure and scope

MODULE –I

Meaning, Definition and importance of Management-Functions of a Manager-Management process- Role of a Manager-Social responsibility of Management-Co-Ordination-Meaning and scope requirements of effective co-ordination-problems in co-ordination.

MODULE –II

Meaning and purpose of planning – steps in planning Process-Limitations-Types of plans, objectives, Strategies, policies, procedures, programmes, management by objectives (MBO) – Decision making- Types of decisions-process of decision making-difficulties in decision making

MODULE –III

Nature and purpose of organizations-different forms of organizations-merits and demerits – linear and staff concepts- organisational charts- departmentations - bases for departmentation - product, function and territory-span of management

MODULE –IV

Authority-responsibility-accountability-delegation of authority-principles of delegation-unity of command – centralization and decentralization –advantages and disadvantages

MODULE –V

Nature and scope of direction-motivation meaning-major theories of motivation – Maslow’s theory - Herberg’s two factor Theory-Leadership Styles-Nature and purpose of controlling

TEXT BOOK

- 1.Kathiresan and Radha, “ Business Management”, Bhavani publications, Chennai,2004

OPEN ELECTIVE - VIII

COMPUTER GRAPHICS

Prerequisite: Knowledge of computers and programming

Objectives:

- Gain knowledge about graphics hardware devices and software used.
- Understand the two dimensional graphics and their transformations.

Outcomes:

- Get an idea about graphics hardware devices and software used.
- Understand the two dimensional graphics and their transformations.

MODULE - I

Overview of Computer Graphics System: Video Display Devices – Raster Scan Systems – Random – Scan Systems - Graphics Monitors and Workstations – Input Devices – Hardcopy Devices – Graphics Software.

MODULE - II

Output Primitives: Line Drawing Algorithms – Loading the Frame Buffer – Line Function – Circle – Generating Algorithms - Attributes of Output Primitives: Line Attributes – Curve Attributes –

MODULE - III

2D Geometric Transformations: Basic Transformation – Matrix Representations – Composite Transformations – Window to View port Co-Ordinate Transformations - Clipping: Point Clipping – Line Clipping – Cohen-Sutherland Line Clipping - Polygon Clipping – Sutherland – Hodgman Polygon Clipping Curve Clipping – Text Clipping.

MODULE - IV

Graphical User Interfaces and Interactive Input Methods: The User Dialogue – Input of Graphical Data – Input Functions – Interactive Picture Construction Techniques.

MODULE - V

Three Dimensional Concepts: 3D-Display Methods – Three Dimensional Graphics Packages.

Text Book:

Donald Hearn M. Pauline Baker, Computer Graphics C Version, 2nd edition, Pearson Education, 2014.

SKILL ENHANCEMENT COURSES (SEC)

Paper Code: CSCS801

L	T	P
0	1	3

SOFT SKILLS

Prerequisite: Basic knowledge of English language

Objectives:

- To enable learners to develop their communicative competence.
- To facilitate learners to improve their soft skills.
- To equip learners with employability skills to enhance their prospect of Placements.

Outcomes

- Develop their communicative competence.
- Understand employability skills to enhance their prospect of placements.

MODULE - I

Nature of technical communication: Stages of communication – Channels of communication – Nature of technical communication – Importance and need for technical communication – Technical communication skills - The Listening process: Types of listening – Listening with a purpose – Barriers to listening – The speech process – Conversion and oral skills – Body language.

MODULE - II

Job interviews: Pre – interview preparation techniques – Interview questions – Answering strategies – Frequently asked interview questions – Projecting a positive image – Alternative interview formats - Group Discussion: Nature of group discussion – Characteristics of successful group discussions – Selection group discussion – Group discussion strategies – Techniques for individual contribution – Group interaction strategies.

MODULE - III

Presentation Skills: Planning the presentation – Preparing the presentation – Organizing your presentation – Rehearsing the presentation – Improving delivery

Text Book:

M. Ashraf Rizvi , “Effective Technical Communication”, 2nd edition , Tata McGraw – Hill Education, 2017

SOFT SKILLS LAB – EXERCISES

1. ORAL PRESENTATION

- TV violence.
- Is the Fast-Food Industry Accountable Legally for poor health?
- Intelligence depends more on the environment than genetic factors.
- Environment vs. technology Impact of technology on learning
- Learning does not eradicate ignorance
- How WiFi improved your life?

2. GROUP DISCUSSION

- NGOs - Do they serve peoples' interests or are they pressure groups?
- Role of women in development.
- Kids today are not what they used to be.
- Repeated elections - Should taxpayers pay for it?
- In India, the whole is less than the parts - Do we lack in team spirit?
- "Dot.com" companies - Is there room for everyone?
- Artificial Intelligence - Will man be ever replaced by machines?

3. INTERVIEW SKILLS

- How to make a good impression
- Basic Interview Questions
- Behavioural Interview Questions

L	T	P
0	1	3

INTRODUCTION TO OFFICE AUTOMATION

Pre-requisite: Basic use of computers.

Objectives:

- To practically learn to use Microsoft word, excel and power point

Outcomes:

- Students will be able to draft official and personal letters using various functions of MSWord.
- Understand, manipulate, represent data with MSExcel using formula and graphs
- Acquire knowledge to prepare presentation for presenting their data through PowerPoint

MODULE – I

MS-WORD - Working with MS Word - Creating a New Document – Working with Font, Page setup, Paragraph and Page background - Text Editing using various features – Margins, Inserting Page Numbers, Pictures, Files, Word Art, Symbols – Header and footer, Page border, working with Columns, Tabs & Indents - Creation & Working with Tables -Margins & Space management in Document - Mail Merge

MODULE – II

MS-EXCEL: Working with MS Excel - concepts of Workbook & Worksheets - Working with Data & Ranges - Different Views of Worksheets - Using different features with Data and Text - Use of Formulas, Calculations & Functions - Cell Formatting including Borders & Shading; Working with Different Chart Types - Printing of Workbook.

MODULE – III

MS-POWERPOINT: Creating and Viewing Presentations – Editing a Presentation – Working with Presentation, slide transitions and Special Effects

Text Books:

1. Dinesh Maidasani , Straight to the Point – MS Office 2010, Laxmi Publications, 2010.
2. Sherry Kinkoph Gunter, Master Visually Microsoft Office 2010, WILEY, 2010.

LIST OF LAB EXERCISES:

1. To create a personal letter using MS-WORD
2. To create company letter head using MS-WORD
3. To create a memo using MS-WORD
4. To create a greeting card using MS-WORD
5. To create a cover page of a project report.
6. To create letter using mail merge.
7. To create a spreadsheet for mark statement of students.
8. To create various graphs with respect to students' academic details.
9. To create a slide show regarding our college and department.

Paper Code: CSCS803

L	T	P
0	1	3

INTRODUCTION TO C++

Prerequisite: Knowledge of C programming

Objectives:

- To learn the basics of C++ programming languages.
- To learn concepts of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance

Outcomes:

- Understand and Apply object oriented programming concepts in problem solving through C++.

MODULE - I

C++ Basics - Objects and Classes: Basics of object and class in C++, Private and public members, static data and function members, constructors and their types, destructors, operator overloading, type conversion

MODULE - II

Inheritance: Concept of Inheritance, types of inheritance: single, multiple, multilevel, hierarchical, hybrid, protected members, overriding, virtual base class- Polymorphism.

MODULE - III

Pointers in C++, Pointers and Objects, this pointer, virtual and pure virtual functions, implementing polymorphism

Text Books:

1. E Balagurusamy , Object Oriented Programming with C++, 7th edition, Tata McGraw, 2017.
2. Deitel and Deitel , “C++: How to Program”, 9th Edition, Pearson, 2013.

C++ LAB – LIST OF EXERCISES

1. Program to illustrate class and objects
2. Program to illustrate inline member function
3. Program to illustrate static data and member functions
4. Program to illustrate constructors.
5. Program to illustrate friend functions
6. Program to illustrate operator overloading (Unary and Binary)
7. Program to illustrate function overloading.
8. Program to illustrate inheritance
9. Program to illustrate pointer to objects
10. Program to illustrate virtual functions & exception handling.

Paper Code: CSCS804

L	T	P
0	1	3

MULTIMEDIA TOOLS

Prerequisite: Familiarity with computers

Objectives:

- Understanding the key principles of animation and its applications.

Outcomes:

- Acquire knowledge of how to create animation using Flash.
- Acquire knowledge of how to create story board, work with files create movies and publish

MODULE – I

Action Scripting Using actions to control a timeline - Using frame labels - Creating button symbols - Creating animated buttons using movie clips – Movie Clip Controls – Browser / network.

MODULE - II

Advanced Animation Methods Creating movies playing within movies (movie clips and .swf) - Controlling multiple timelines (movies) through action scripting - Critique storyboards.

MODULE - III

Streamlining Files for Use on the Web, Publishing Files to the Internet & Pre-loaders- Controlling sound with script - Exploring types of output - Work on final project in class - Importing video - Publishing demo (video) reels on web - Publishing and exporting files.

REFERENCE BOOKS

1. E. A. Vander Veer and Chris Grover, “Flash CS3”, O’reilly, 2007
2. Richard Williams, “The Animator’s Survival Kit”, 2009

LIST OF PRACTICAL

1. Creating Company Title
2. Create new Clip art Company Logo
3. Animated Buttons and Menus
4. Text Graphics
5. Morphing
6. Shape and Motion Tween
7. Creating an animated Web site
8. Working with Audio and video

L	T	P
0	1	3

PHP PROGRAMMING

Prerequisite: Knowledge of web Technology and DataBase programming.

Objectives:

- To learn the fundamentals of PHP language
- To learn how to use PHP language to create websites

Outcomes:

- Understand how to write code using PHP
- Acquire knowledge about web techniques

MODULE – I

Introduction to PHP – brief history – installing PHP – Language basics – Lexical structure – data types – variables – expressions and Operators – flow-control statements – including code – embedding PHP in web pages

MODULE – II

Functions – Strings – Arrays - Multidimensional Arrays- Extracting Multiple Values - Slicing an Array - Checking Whether an Element Exists - Traversing Arrays – Sorting - Objects – Terminology - Creating an Object - Accessing Properties and Methods - Declaring a Class – Introspection

MODULE – III

Web Techniques - HTTP Basics - Server Information - Processing Forms - Setting Response Headers - Maintaining State - Databases - Using PHP to Access a Database - Relational Databases

Text Book:

Kevin Tatroe, Peter MacIntyre, and Rasmus Lerdorf, “Programming PHP: Creating Dynamic Web Pages”, O’Reilly, 3rd edition, 2013.

PHP Lab – List of Exercises

1. Create a PHP page using functions for comparing three integers and print the Largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.
Sample string : "The quick " " brown fox"
Expected Output : The quick""brownfox
9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

Paper Code: CSCS806

MOBILE APPLICATION DEVELOPMENT

L	T	P
0	1	3

Prerequisite : Basic Understanding of Programming Concepts.

Objectives:

- To introduce students to the Mobile application development ecosystem.
- To impart mobile application development skills.

Outcomes:

- Understand the anatomy of Android app and develop small application
- Understand to use multimedia handling in android application

Module I: Introduction to Mobile Apps - Mobility Panorama - Various Mobile Platforms - Different Approaches to Mobile Development - Comparison of Various Mobile app development platforms - Overview of Android App Development Scenario - Mobile App development challenges.

Module II: Android App Development - Setting up the development environment - Building the Hello World Android App - Anatomy of Android Apps - Logical Components. Android Activities - UI Resources and Elements - Activity interaction - Fragments - Services - App Data Persistence.

Module III: Multimedia Handling in Android Apps : Audio, Video and Images, Capture and Storage - Graphics and Animation - Location Services - Sensor handling in Android apps - App markets and publishing apps.

Text Book:

- *Composing Mobile Apps : Learn, Explore and Apply using Android*, by Anubhav Pradhan and Anil V Deshpande, Wiley Publications, 2014, ISBN: 978-81-265-4660-2.

Web Resources:

- <https://developer.android.com/training/basics/firstapp/index.html>
- <https://developers.google.com/training/android/#for-new-programmers>

Lab Exercises:

- Design and develop a mobile app to compute Body Mass Index.
- Design and Develop a mobile app for an event registration form.
- Design and develop a mobile app for storage and retrieval of data.
- Design and develop a mobile app with multimedia components.
- Design and develop a mobile app to utilize various sensors.
- Design and develop a mobile app to utilize location services.

3	0	0

MATHEMATICS FOR COMPUTER SCIENCE

Prerequisite: Knowledge of basic mathematics

Objectives:

- To learn rules and techniques to recognize valid logical argument
- To learn graphs with all types and trees with all algorithms

MODULE - I

Connectives, Statement formulae, well-formed formulae-Tautologies - Equivalence of Statement formulae, Duality law-Tautological implications- Functionally complete set of connectives-NAND and NOR connectives.

MODULE - II

Principal conjunctive and disjunctive normal forms Inference calculus-validity of conclusion using truth table- Rules of inference.

MODULE - III

Graphs-Applications of graphs-Incident and degree-pendant and isolated vertices- Number of odd vertices in a graph-Isomorphism of graphs-sub graphs -Walks-paths and circuits - Connected graphs and related theorems & problems.

MODULE - IV

Euler graphs operations on complete graphs- More on Euler graphs – Konigsberg bridge problem- Hamilton paths and circuits.

MODULE - V

Trees-properties of Trees with proof-Pendant vertices in a Tree-Distance and Center in a Tree-rooted and binary trees-spanning trees- Fundamental Circuits-Distance between spanning trees shortest spanning trees- Kruskal's algorithm.

Text Books:

1. J.P.Tremblay & R.Manohar, "Discrete Mathematical Structures with applications to Computer science", Tata McGraw-Hill, 2002.
2. Narsingh Deo, "Graph Theory with applications to Engineering and Computer science", PHI, 2002.

GENERIC ELECTIVE - II

Paper Code: CSCS126

L	T	P
3	0	0

NUMERICAL METHODS

Prerequisite: Knowledge of basic mathematics

Objectives:

- To learn about linear interpolation methods
- To learn about numerical integration & Differentiation methods

Outcomes

On successful completion of the course students will be able to:

- Understand the linear interpolation methods.
- Understand the numerical integration & Differentiation methods

MODULE - I

Roots of Non-Linear Equations - Iterative methods , Bisection methods, method of false position – Newton-Raphson method – Statement of Fixed Point Theorem – Fixed point iteration: $x=g(x)$ method.

MODULE - II

Direct Solution of linear Equations - Gaussian elimination and Gauss-Jordon methods - Iterative methods: Gauss Jacobi and Gauss-Seidel methods- Inverse of a matrix by Gauss Jordon method – Eigen value of a matrix by power method.

MODULE - III

Curve Fitting Interpolation - Lagrangian Polynomials – Divided differences – Interpolating with a cubic spline – Newton’s forward and backward difference formulas.

MODULE – IV

Numerical Differentiation - Derivatives from difference tables – Divided differences and finite differences. Numerical integration - Trapezoidal and Simpson’s 1/3 and 3/8 rules – Romberg’s method – Two and Three point Gaussian quadrature formulas.

MODULE - V

Ordinary Differential Equation - Taylor series method – Euler and modified Euler methods – Fourth order Runge – Kutta method for solving first and second order equations.

APPLIED STATISTICS

Objectives:

- To learn the basics of statistics concepts
- To learn solving correlation and regression problems

Outcomes:

- Ability to understand and represent data
- Ability to analyze and interpret data.

MODULE - I

Diagrammatic and Graphic Presentation: General Rules for Constructing Diagrams, Types of Diagrams, One Dimensional or Bar Diagrams, Types of Bar Diagrams, Two-Dimensional Diagrams, Limitations of Pie Diagrams.

MODULE - II

Measures of Central Value: Arithmetic Mean: Calculation of Simple Arithmetic Mean-Individual Observations, Calculation of Arithmetic Mean-Discrete Series, Calculation of Arithmetic Mean-Continuous Series, Merits and Limitations of Arithmetic Mean.

Median: Calculation of Median-Individual Observations, Computation of Median-Discrete Series, Calculation of Median-Continuous Series, Merits and Limitations of Median

Mode :Calculation of Mode-Individual Observations, Calculation of Mode-Discrete Series, Calculation of Mode-Continuous Series, Merits and Limitations of Mode.

MODULE - III

Measures of Dispersion: Significance of Measuring Variation, Properties of a Good Measure of Variation, The Interquartile Range or the Quartile Deviation, Merits and Limitations, The Mean Deviation, Calculation of Mean Deviation, Calculation of Mean Deviation-Continuous Series, Merits and Limitations, The Standard Deviation, Difference Between Mean Deviation and Standard Deviation, Calculation of Standard Deviation, Merits and Limitations.

MODULE - IV

Correlation Analysis: Types of Correlation, Scatter Diagram Method, Merits and Limitations of the Method, Karl Pearson's Coefficient of Correlation, Direct Method of Finding Out Correlation Coefficient, Origin is made and Problems, Rank Correlation Coefficient, Merits and Limitations of the Rank Method.

MODULE - V

Regression Analysis: Uses of Regression Analysis, Difference Between Correlation and Regression Analysis, Regression Lines, Regression Equations, Regression Equation of Y on X, Regression Equation of X on Y and Problems

TEXT BOOK

S.P.GUPTA, "Statistical Methods", Sultan Chand & Sons, Educational Publishers, New Delhi, 2016

THEORY OF COMPUTATIONS

(Only statements and applications of Theorems)

Prerequisites:

Basic knowledge of programming languages and data structures

Objectives:

- To understand the foundation of computing
- To realize the theoretical knowledge behind the computation
- To understand the construction of formal languages

Outcomes:

1. Understand the basic computation and construction of formal languages
2. Gain the knowledge about automated system

MODULE - I

Automata Theory: Finite State Systems – Definition of an Automaton - Non-Deterministic Finite Automaton - Equivalence of DFA and NFA - Finite automata with output (Mealy and Moore Models) - Minimization of Finite Automata – Regular Expressions.

MODULE - II

Push Down Automata Theory: Context-Free Languages and Derivation Trees – Ambiguity in Context-Free Grammars – Chomsky Normal Form – Greibach Normal Form. Push Down Automata – Definition, Acceptance by Push Down Automata – Push Down Automata and Context Free Languages.

MODULE - III

Turing Theory: Turing Machines – Computable Language and Functions – Techniques for TM Construction – Modification of TM.

MODULE - IV

Chomsky Hierarchy: Regular Grammars – Unrestricted Grammars – Context Sensitive Languages.

MODULE – V

Linear Bounded Automata – Definition – Linear Bounded Automata and Context Sensitive Languages

Text Books:

1. Daniel I.A. Cohen, "Introduction to Computation Theory", John Wiley & sons. 2nd edition
2. John E.Hopcraft and Jeffery D. Ullman, "Introduction to Automata theory, languages and computations", Narosa Publication. 1st edition
- 3 "K.L.P. Mishra & N. Chandrasekaran" Theory of Computer Science (Automata, Languages and Computation), PHI.

Non-Major Elective Courses

Paper Code: CSCS171

L	T	P
3	1	0

BASICS OF COMPUTERS & OFFICE AUTOMATION

Pre-requisite: No specific pre-requisite.

Objectives:

- To understand how to use software packages viz MS-Word, Excel and Powerpoint for day-to-day activities.

Outcomes:

- Non computer science will be able to understand the basics of computers and understand the office automation tools such as word, excel and power point

MODULE – I

DOS: Internal & External commands; Wildcard Character; file name; Creating/Editing file; batch file - MS Windows: Windows Basic - Introduction to Windows- Using My Computer; Using Windows Explorer - Printing- Introduction to Accessories and Control Panel

MODULE – II

Word processing - Introduction - Introduction to MS Word - Working with MS Word - Creating a New Document-Different Page Views and layouts - Working with Styles, Text Attributes; Paragraph and Page Formatting - Text Editing using various features - Advanced Features of MS-Word – bookmarks - Spell Check and Thesaurus; Find & Replace; Headers & Footers ; Inserting – Page Numbers, Pictures, Files, Auto texts, Symbols -Working with Columns, Tabs & Indents;- Creation & Working with Tables -Margins & Space management in Document - Mail Merge.

MODULE – III

MS Excel - Introduction and area of use -Working with MS Excel - concepts of Workbook & Worksheets - Working with Data & Ranges - Different Views of Worksheets - Column Freezing, Labels, Hiding, Splitting etc.;-Using different features with Data and Text - Use of Formulas, Calculations & Functions-Cell Formatting including Borders & Shading; Working with Different Chart Types - Printing of Workbook & Worksheets with various options.

MODULE -IV

MS PowerPoint - Introduction & area of use- Working with MS PowerPoint-Creating a New Presentation-Working with Presentation; Using Wizards- Slides & it's different views; Inserting, Deleting and Copying of Slides

MODULE – V

Working with Notes, Handouts, Columns & Lists- Adding Graphics, Sounds and Movies to a Slide-Working with PowerPoint Objects; Designing & Presentation of a Slide Show.

Text Books:

1. Rob Tidrow, Master Visually Windows 7, John Wiley, 2010.
2. Dinesh Maidasani , Straight to the Point – MS Office 2010, Laxmi Publications, 2010.
3. Sherry Kinkoph Gunter, Master Visually Microsoft Office 2010, WILEY, 2010.
4. Faithe Wempen, Computing Fundamentals: Introduction to Computers, WILEY, 2014.

Paper Code: CSCS172

L	T	P
3	1	0

FUNDAMENTALS OF INFORMATION TECHNOLOGY

Pre-requisite: No specific pre-requisite.

Objective:

- To acquire the basic knowledge about computers

Outcomes:

- Understand the concepts and various components of computers. Acquire knowledge about internet and other applications

Module - I

Introduction to Computers - Generation of Computers - Classification of Digital Computer - Anatomy of Digital Computer.

Module - II

CPU and Memory - Secondary Storage Devices - Input Devices - Output Devices.

Module - III

Introduction to Computer Software - Programming Language – Operating Systems - Introduction to Database Management System.

Module - IV

Computer Networks - WWW and Internet - Email - Web Design

Module - V

Computers at Home, Education, Entertainment, Science, Medicine and Engineering - Introduction to Computer Security - Computer Viruses, Bombs, Worms.

Text Books:

1. Fundamentals of Information Technology, Alexis Leon and Mathews Leon, Vikas Publishing House Pvt. Ltd., ISBN-10: 8182092450 & ISBN-13: 978-8182092457, 2009.
2. Faithe Wempen, Computing Fundamentals: Introduction to Computers, WILEY, 2014.

Paper Code: CSCS173

L	T	P
3	0	1

FUNDAMENTALS OF 'C' LANGUAGE

Pre-requisite: No specific pre-requisite.

Objective:

- To learn how to solve common types of computing problems.
- To learn about various programming constructs of C

Outcomes:

- Analyze a given problem and develop an algorithm to solve the problem
- Use the 'C' language constructs in the right way. Design, develop and test programs written in 'C'

MODULE- I

Introduction to Programming - How to develop a program, Algorithms, Flow-charts, Types of Programming Languages, Compiler and Linker, Testing and Debugging a program, Documentation. Constants, Variables & Data Types - Character set, C Tokens, Identifiers and Keywords, Constants, Variables, Data types - Operators & Expressions - Managing Input & output operations

MODULE - II

Decision Making – Branching & Looping - Arrays - One dimensional array: Array Manipulation, Different operations on one dimensional arrays, two dimensional array, operations on two dimensional arrays, multi-dimensional array- Handling of Character Strings.

MODULE - III

Functions - Top down approach of problem solving, standard library functions, passing values between functions, scope rules of functions, calling convention, return type of functions, call by value and call by reference, recursive functions

MODULE – IV

Storage Classes - Scope and extent, Storage Classes in a single source file: auto, extern and static, register,

MODULE - V

Structures and Unions - Defining a structure, Declaring Structure variables, accessing structure members, structure initialization, copying and comparing structure variables, operation on individual members, arrays of structures, arrays within structures, structures and functions, union, size of structure,

Text Books:

1. E. Balagurusamy, “Programming with ANSI-C”, 8th Edition, Tata McGraw Hill, 2019,
2. Hanly J R & Koffman E.B, “Problem Solving and Programming design in C”, 7th edition, Pearson Education, 2012.

3	0	1

WEB DESIGNING

Pre-requisite:

- Knowledge of computers.

Objectives:

- To acquire the fundamental knowledge about internet & WWW.
- To learn how to develop static and dynamic web pages / websites for any organization.

Outcomes:

- Understand the scenario of web page development
- Ability to develop web pages using HTML and Cascading Style Sheets.

MODULE - I

Internet and the World Wide Web - Internet - Introduction to internet and its applications, E-mail, telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, internet address, World Wide Web (WWW) - World Wide Web and its evolution, uniform resource locator (URL), browsers – internet explorer, Netscape navigator, opera, Firefox, chrome, Mozilla. search engine, web saver – apache, IIS, proxy server, HTTP protocol

MODULE – II

HTML5 – Introduction - formatting text by using tags, using lists and backgrounds, creating hyperlinks and anchors - Style sheets, CSS formatting text using style sheets, formatting paragraphs using style sheets.

MODULE – III

Page layout and navigation - Creating navigational aids: planning site organization, creating text based navigation bar, creating graphics based navigation bar, creating graphical navigation bar, creating image map, redirecting to another URL, creating division based layouts.

MODULE – IV

Tables, Forms and Media - Creating tables: creating simple table, specifying the size of the table, specifying the width of the column, merging table cells, using tables for page layout, formatting tables: applying table borders, applying background and foreground fills, changing cell padding, spacing and alignment

MODULE – V

Creating user forms: creating basic form, using check boxes and option buttons, creating lists, additional input types in HTML5, Incorporating sound and video: audio and video in HTML5, HTML multimedia basics, embedding video clips, incorporating audio on web page.

Text Book:

Faihe Wempen, “HTML5 Step by Step”, Microsoft Press, 2011.

**B.Sc DEGREE EXAMINATION
Month and year**

Computer Science

**Semester
Subject Name**

Time: Three hours

Maximum: 75 marks

SECTION - A (10 X 2 = 20 marks)

Answer **ALL** the questions

Totally 10 questions. 2 questions from each unit

SECTION - B (5 X 5 = 25 marks)

Answer **ALL** the questions, choosing either (a) or (b).

11. a)

(OR)

b)

12. a)

(OR)

b)

13. a)

(OR)

b)

14. a)

(OR)

b)

15. a)

(OR)

b)

one question (a & b) from each Unit [Equal distribution for all 5 units]

SECTION - C (3 X 10 = 30 marks)

Answer any **THREE** questions.

16.

17.

18.

19.

20.

One question from each Unit
